Model: Former 600

## How it works

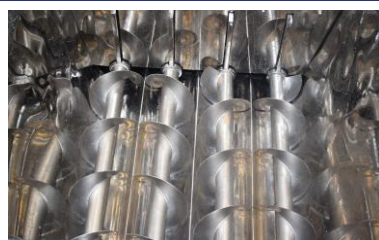

Forming is done in the following steps:

1. Filling of the product into the hopper
2. Feeding of the pressing chamber by feed screws
3. Pressing the product into the holes of the mould plate
4. Ejecting of the product. Low maintenance costs guarantee good value and quality.

## Superior quality of the finished product

Meat fibers are not crushed or destroyed on Former 600 – instead they retain their natural alignment so that the finished patty has the superior bite, texture and eating quality. The former produces formed products with excellent shape retention and weight accuracy using only air to release the products.

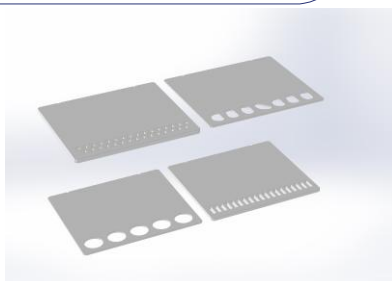

## Easy and fast changeover to new product

High speed production of exact-weight patties. Molding former machine is suitable for almost all types of products. The machine allows you to make a variety of forms and work with different materials.

## Advantages:

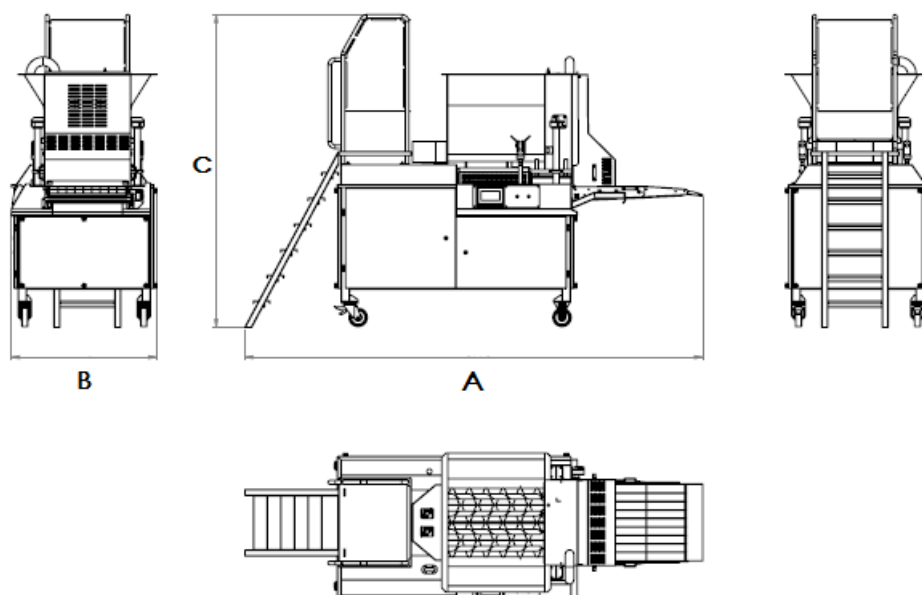

- Meat of almost any shape
- Simple design
- Simple changeovers make it easy to produce various size and shape patties
- Easily replaceable molding plates guarantee a minimum changeover time.
- Includes a programmable PLC that optimizes the molding cycle for each individual product.
